(54) IMAGE PROCESSING UNIT

(57)Abstract:

PROBLEM TO BE SOLVED: To conduct color adjustment.

SOLUTION: A controller 16 obtains color data RREF, GREF, BREF of a picture element at a position pointed out on a display screen and discriminates whether or not color data are balanced. When the balance is not taken, data having an input output characteristic to improve the balance are written in an LUT of a color at the outside of a preferred balance. Thus, not only the color balance at a designated position is improved but also the color balance of the entire image is enhanced.
